

**I CLAIM:**

1. A cable coupler device comprising:

a receptacle including a first side having at least one orifice  
formed therein, and a second side having at least one aperture  
5 formed therein, and

a circuit board received in said receptacle, and including at  
least one first coupler attached thereto and engaged in said at least  
one orifice of said receptacle, and including at least one second  
coupler attached thereto and engaged in said at least one aperture of  
10 said receptacle, for allowing said at least one first coupler and said  
at least one second coupler to be directed toward different directions  
relative to each other.

2. The cable coupler device as claimed in claim 1, wherein said  
first side and said second side of said receptacle are perpendicular  
15 to each other.

3. The cable coupler device as claimed in claim 1, wherein said  
at least one first coupler and said at least one second coupler are  
IEEE couplers.

4. The cable coupler device as claimed in claim 1, wherein said  
20 at least one first coupler and said at least one second coupler are  
USB couplers.

5. The cable coupler device as claimed in claim 1, wherein said  
receptacle includes an upper portion having at least one opening  
formed therein, and said circuit board includes at least one third  
25 coupler attached thereto and engaged in said at least one opening of  
said receptacle.

6. The cable coupler device as claimed in claim 5, wherein said

at least one third coupler is an IEEE coupler.

7. The cable coupler device as claimed in claim 5, wherein said at least one third coupler is a USB coupler.

8. The cable coupler device as claimed in claim 1, wherein said  
5 receptacle includes a second orifice formed therein, and said circuit board includes at least one third coupler attached thereto and engaged in said second orifice of said receptacle, for coupling to power source.
